★ Safety Warning

- 1 It is strictly forbidden to install the product in the environment containing flammable and explosive gas and moisture condensation, and it is strictly prohibited to operate the product with wet hands.
- 2 It is forbidden to touch the conductive parts of the product
- 3 The installation, maintenance and maintenance of the product must be carried out by professional personnel to ensure that the line is powered off.
- 4 Do not play with children or packaging.
- 5 Sufficient space and safe distance should be reserved around the product installation.
- 6 Do not install in gas medium can corrode metal and damage
- 7 When the product is installed and used, the standard conductor must be used and the power supply and load meeting the requirements must be connected.
- B In order to avoid dangerous accidents, the installation and fixation of products must be carried out in strict accordance with the requirements of the manual.
- 9 After removing the package, check whether the product is damaged and check the integrity of the goods.
- $\boxed{10} \ \mbox{When} \ \ \mbox{the product} \ \mbox{is used in outdoor, dust or humid}$ environment, it should be installed in the distribution box with corresponding protection level.

1 Main use and scope of application

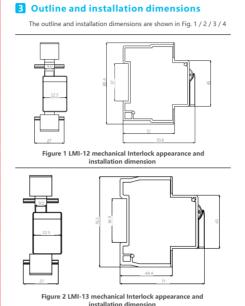

LMI series mechanical interlock is composed of two-stage (multi-stage) circuit breaker and interlock conversion accessories. It is mainly used in throut breaker and interious conversion accessiones. It is mainly used in home life, business clubs, hotels, shopping malls and other occasions where two main circuits cannot work at the same time.

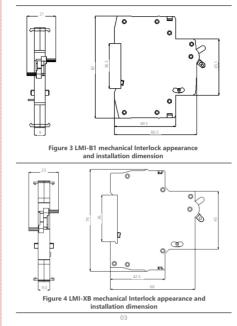

As a separate mechanism, mechanical interlock is assembled in the middle of two-stage (multi-stage) circuit breakers. When the common power circuit breaker is on and needs to change the line, manually disconnect the handle of the common circuit breaker, operate the mechanical interlock sliding cover to push the common circuit breaker, and mechanical interlock sliding cover to push the common circuit breaker, and then open the handle of the standby power supply circuit breaker to close it. Under the action of the interlock conversion accessory, the common power circuit breaker can ensure that the two lines will not be connected at the same time and switch the power supply safely at any time, it can protect the power line and electrical equipment or other mechanical and electrical equipment. Regardless of the primary and secondary, both circuit breakers can achieve the above operation.

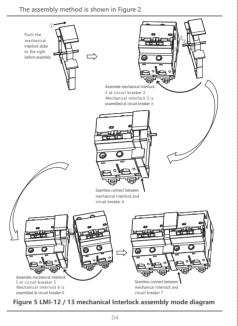

2 Main technical parameters

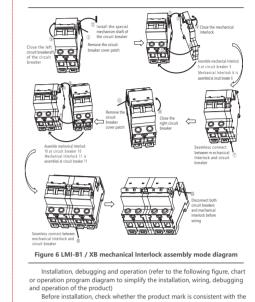

The main parameters are shown in Table 1 Table 1 technical parameters and performance of main circuit

	The second secon		
Ambient temperature (°C)	35℃~+70℃		
Altitude (m)	The altitude of the installation site shall not exceed 3000m		
	The relative humidity is less than 50% at +40 °C and 90% at + 20 °C		
class of pollution	Grade 2		
Installation category	Class II and III		
Pole number	IP.		
Product width	9mm		
Mechanical interlock	Manual switching of dual power supply		
Assembly method	Between two or more stage circuit breakers 1P, 2P, 3P, 4P)		
	Altitude (m) Humid and hot atmospheric conditions class of pollution Installation category Pole number Product width Mechanical interlock		

conditions used;

Switch on the circuit breaker and mechanical Interlock before LMI-XB /

The left circuit breaker must be installed with factory equipped shaft

Note: mechanical Interlock products shall be installed in parallel with miniature circuit breakers of the same specifications.

4 Fault analysis and troubleshooting

Table 2 examples of troubleshooting

Fault phenomenon	Cause analysis	Elimination and preventive measures	
Sliding cover stuck	The mechanical Interlock sliding cover was removed by misoperation, and burr was produced after reassembly		
Fracture of assembling fixed column	Transportation causes	Assembly in strict accordance with the above figure	
	Not assembled according to the instructions		
Install the rear circuit breaker latch	The mechanical Interlock shaft is skewed or the mechanism parts are damaged		
Circuit breaker closing at the same time	Left circuit breaker shaft not installed	Check that the left circuit breaker shaft is in place	

5 Warranty period, environmental protection and other legal provisions

5.1 Warranty period

Under the normal storage and transportation conditions, and the product package or product itself is in good condition, the warranty period is 24 months from the date of production.

The following conditions are not covered by the warranty:

Damage caused by organization or personnel not assigned by the company, or self disassembly and repair.

3) The product is beyond the warranty period.

4) Damage caused by force majeure.

In order to protect the environment, when the product or its components are scrapped, please properly treat it as industrial waste,Or by the recycling station in accordance with the relevant national regulations for classification, dismantling, recycling, etc.

6 Product selection and ordering instructions

When ordering, the user must clearly state the name, model and order quantity of the product;

For example, the order quantity of LMI is 1000 sets; Please write: LMI-12 mechanical interlock 1000 sets.

See Table 3 for the model and specification of the suitable circuit

Product model / Model / specification of suit
